

Student Digital Learning Officers

What are student Digital Learning Officers?

As part of the [TEL Strategy 2017-2021](#), the Centre of Learning and Teaching (CELT) has employed four student Digital Champions to work in partnerships with CELT to support the digital literacy skills development of staff and students. The University aims to have students working as co-constructors of the digital environment.

The students work on a number of projects, alongside our Learning Technologists, researching and promoting digital skills and digital technologies. This includes accessibility within Blackboard and Office365, collaboration within Teams, supporting students to use PebblePad for reflective practice.
