

Poll Everywhere Guide

This guide explains basic settings and important information. There might be GDPR and privacy issues if you select some settings!

There are four basic steps to getting a Poll Everywhere up and running

1. Choose a type of poll
2. Create the content for the poll
3. Add it into a presentation, or share it
4. Activate it for responses

You also need to be aware of your account settings which determine how polls are displayed, for how long and some privacy settings.

Part 1 Getting started

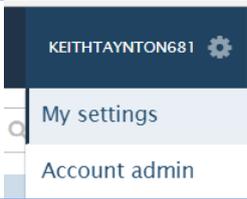

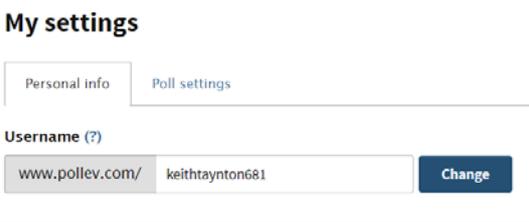

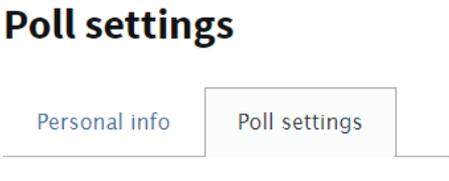

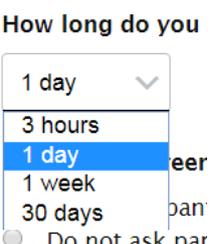

You'll need a university Poll Everywhere account to create polls. Apply using the link on this page: <https://digitalhandbook.wp.derby.ac.uk/poll-everywhere/>

Once you have an account, log in at <https://www.polleverywhere.com>

Account settings

The first thing to do is check your account settings which modifies all your polls and customises your account access web address.

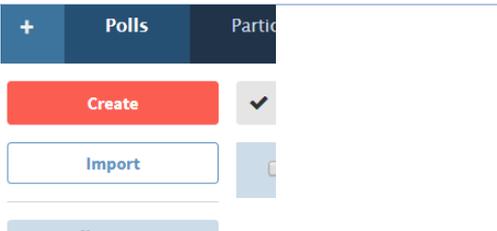

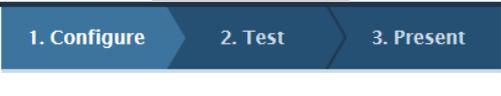

Some of these settings can be overridden for each poll. See part 2.

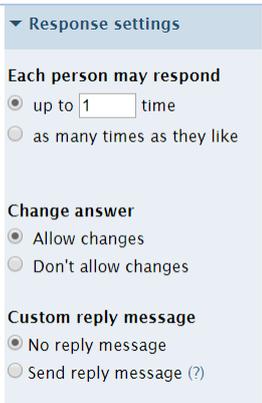

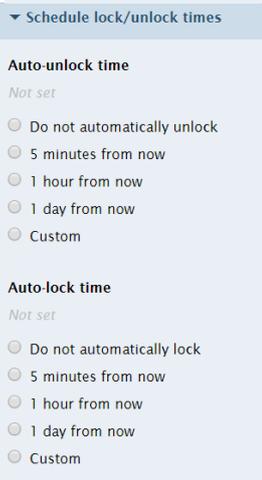

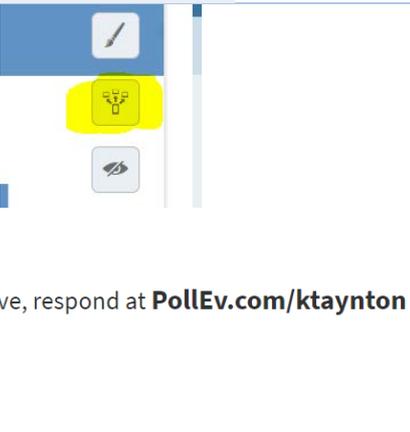

Navigate to [account name] > My Settings on the top right of the page.	
Choose your custom URL You can change your webaddress for all your active polls here. Type in a new username and click change.	
Change poll settings Click on the Poll settings tab	
How long do you want your polls to stick around after you activate them? This sets the default length of time a poll is available for once active. After this time, the poll closes.	

<p>Participant screen names Potentially a GDPR and privacy issue.</p> <p>When set to Ask participants to enter a screen name before they respond to a poll, users can optionally set a name (any name can be used). There is also an option to skip this in which case an anonymous name will be created.</p> <p>When Do not ask participants to enter screen names (auto-generated IDs will be used to track responses) users will not get asked for a name, and an anonymous name will be created.</p>	<p>Participant screen names (?)</p> <ul style="list-style-type: none"> <input checked="" type="radio"/> Ask participants to enter a screen name before they respond to a poll <input type="radio"/> Do not ask participants to enter screen names (auto-generated IDs will be used to track responses) <p>Recommended setting: Do not ask participants...</p>
<p>When should correct responses be visible to participants?</p> <p>This setting determines when a user can revisit a poll and find out answers, if a question with answers has been set in a poll.</p>	<p>When should correct responses be visible to participants? (?)</p> <div style="border: 1px solid #ccc; padding: 5px;"> <p>1 day after response ▾</p> <p>Never</p> <p>Immediately</p> <p>3 hours after response</p> <p style="background-color: #0070c0; color: white;">1 day after response</p> <p>1 week after response</p> <p>30 days after response</p> </div> <p>instructions be in?</p>
<p>Save Click save button to confirm changes.</p>	<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="background-color: #e67e22; color: white; padding: 10px 20px; border-radius: 5px;">Save</div> <div style="color: #0070c0; text-decoration: none; padding: 10px 20px;">Cancel all changes</div> </div>

Part 2 Creating and using a Poll

Choose a type of poll and its settings

<p>Click on Create in the top left corner.</p>	
<p>Choose a poll type and enter the questions or content.</p>	
<p>Click Create.</p>	
<p>Check the poll's settings on the right Configure box.</p>	

<p>Audience restriction and identity</p> <p>Choose who can participate and how they identify themselves.</p> <p>Recommended settings: Everyone Completely Anonymous</p>	
<p>Response settings</p> <p>Choose the settings you would like</p>	
<p>Schedule lock/unlock times</p> <p>These determine when a poll is open and closed for submissions.</p>	
<p>To test the poll, activate it. This makes it available on your custom web address! Deactivate after testing.</p> <p>Click the activate button on the toolbar in the poll results screen.</p> <p>Click the PollEv.com/[name] to visit the poll and test it.</p>	

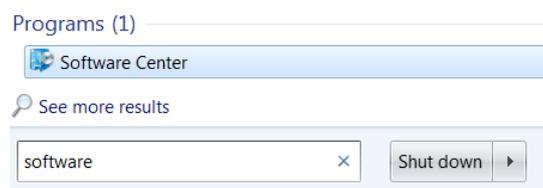

Add it into a presentation, or share it

Now your poll is ready to use. You can share it in several ways. The two most common are in a PowerPoint as an interactive slide, and via a link.

Your currently active poll is always available at [PollEv.com/\[name\]](https://PollEv.com/[name]). If the time expires on the poll then it will deactivate and your webpage will show nothing.

Powerpoint

To add a poll to PowerPoint you must install the PowerPoint plugin. This is available on Staff PCs through Software Centre. This is found in Start > Search: software

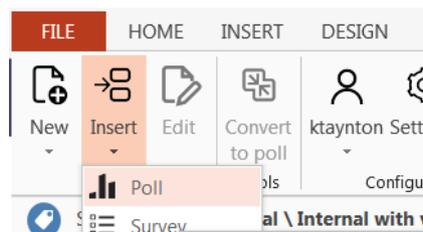

Once Poll Everywhere is installed you will have an extra tab in PowerPoint

Click on Login and then enter your Poll Everywhere username and password.

You can then click Insert, choose a type.

A pop up will then appear with your polls. Tick the boxes of all the polls you want to insert and click Insert activities.

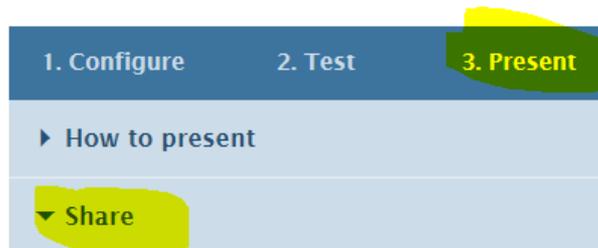

The poll is then in your PowerPoint as a slide.

Sharing a link

If you wanted to share a poll in an email or on a website you can share with a link. Polls shared in this way are always active and open.

To get the link, on the Poll Everywhere site, in the Present tab on the poll setting screen (see Part 1 above) choose Share.

You will then get several options for different sharing types.

Activate a poll to collect responses, and deactivate a poll

Activating a poll makes it live at the current poll in your page, and you can accept responses to it.

That is, anyone who visits PollEv.com/YOURNAME will see the currently activated poll and can respond.

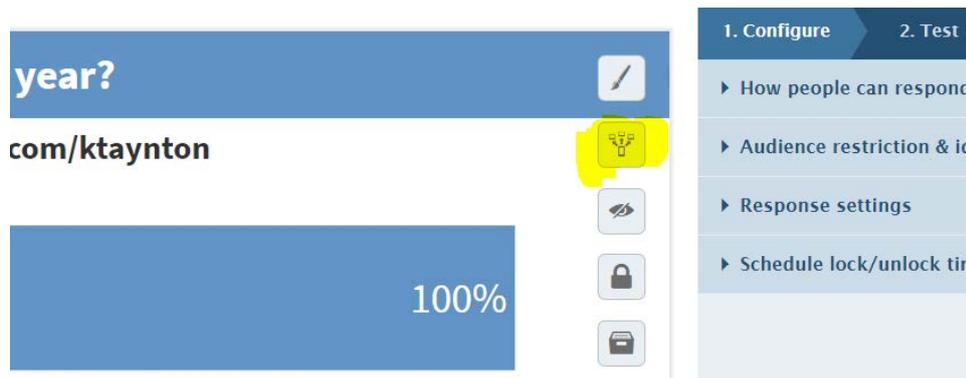

If you're embedding a poll in PowerPoint, the poll you're displaying will automatically be activated and responses collected.

However, if you share the poll with a shareable link (see above) then it will always be available for responses, even though it won't display in your pollev.com/yourname page.

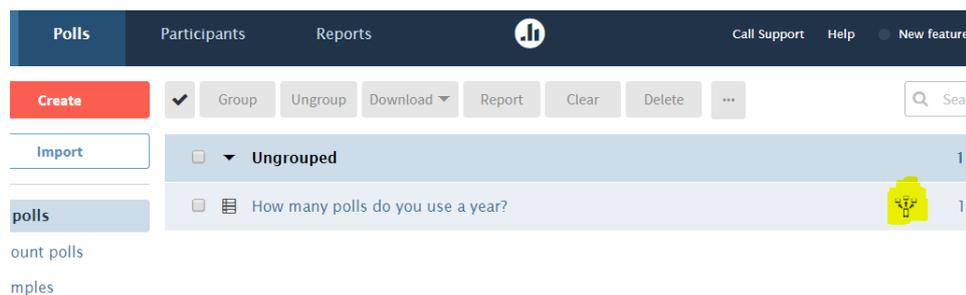

To activate a poll you can also use this icon where ever you see it.

It is displayed on the poll settings page.

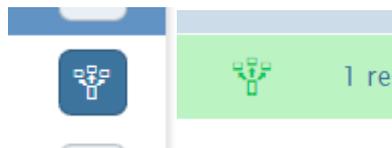

And also the list of polls you own

Click the icon to activate that poll.

It is activated when it shows blue or green.

To deactivate the poll, click the icon again.
